

Bertelkamp Automation is an Authorized Universal Robots Distributor

Universal Robots collaborative robot arms are helping businesses of all sizes overcome labor and skills shortages while creating safer working environments for employees. These flexible, cost-effective, user-friendly, 6-axis robots are designed to work alongside people in a wide variety of manufacturing environments.

Flexpipe Builds Custom Structures Faster, Better, Cheaper

Affordable and durable modular system

80/20's Flexpipe lets you create polyethylene coated steel **modular framing structures and material handling systems** used predominantly in lean manufacturing applications. This custom-made modular system is affordable and durable.

Lab-tested for strength and independently verified, Flexpipe create structures that can handle loads up to 2,000 pounds. That's the foundation of confidence when you're building solutions for industrial environments. Made from Q235 cold-rolled steel, these pipes are 20% stronger than hot-rolled alternatives.

80/20® Inc.

Cone Drive Competitive Interchange Program

Make the switch to higher quality!

Cone Drive designs and manufacturing high quality gearing by engineering solutions, tackling challenging applications, and

exceeding the needs of our customers.

Cone Drive's Competitive Interchange Program provides aggressive pricing for customers who make the switch to a Cone Drive product. Their double enveloping gearing ensures you'll get higher torque, better performance, and an industry leading warranty.

Bring us your manufacturer's part number and we'll help you easily make the switch and lock in competitive pricing today!

Festo Perfectly Combines Electrics and Pneumatics

Robust, fast and flexible integrated solutions

FESTO

Festo integrated solutions combine the robustness and speed of pneumatic systems with the control and flexibility of electrical systems. This leads to improved machine performance and increased system efficiency.

From valve terminals with fieldbus interfaces to open system architecture and IoT solutions,

Festo offers 5 Solution approaches for the

integration of electrical and pneumatic systems that help minimize system complexity and maximize performance.

**5 Solution Approaches
for the Integration
of Electrical and
Pneumatic Systems**

Bring Confidence to your Next Vision Application

Take advantage of our Vision Lab and Free Evaluations!

With the creation of our state-of-the-art Vision Lab, it is now easier than ever to have your machine vision, 3D inspection, or barcode reading application evaluated by one of our COGNEX vision specialists.

Bertelkamp Automation combines our extensive experience in machine vision and our state-of-the-art vision lab to help provide you the confidence to move projects forward. Our team of application engineers is available to provide you real

data to determine the feasibility of vision guidance, inspection, automatic identification, or gauging applications. We utilize our vast array of available lights, lenses, 2D or 3D vision systems and software to perform these feasibility studies.
